

Pinnacanthus Neubert

(1)

Sphaeromavella fimbria

P. phaeophanus ~~reps~~ wet-sped. with rhizoids
 Sporophore v. sl branch & stalks 840 x 11-12 mm
 4-5-6 sped clavate Spms 5-6 x 3-3.5
 tubercle leaf
 F/P 0.4 - 0.8 F = ca 18 μm

Ascolobus

Small white cf. albivorus

rarely capped cf. degluipolis

Spores minutely verrucose with occasional

transverse cracks through to edges

hot yellow mass
examination hyal + anastomosing cells.

33 x 16
26.7 - 14.7

Asci J+
Spore sheath
mostly all round, occ.
1-sided

Sh. degluipolis elegans?

Spherical, hyaline, verrucose cells associated with ~~examination~~ 15-20 μm
no - something else

P. lobatus

orange spores

10 x 6

crystalline

1. odophanus

Cernus

Also very slender (type spores) ascus - 8 -

apical g.p. black 6 x 3.5

Sporangium intertexta

Cop. Steccherus

Schizothecium vesticula

light Breath

Syncephalis?

depressor

Stout ~~meant~~

400 - 450 ⁻⁸⁰⁰ $\mu\text{m} \times$

Sporangia

heads 100 μm diam

✓ 2-3 μm diam at base, tapering to 16 μm
then to 40 μm diam head

Microsporia (immature) 30 x 4 μm

Spores 10 x 6

Coprinus

white, round celled veil - smooth -

a few ✓ elongated elements towards base when

v. young Spores 5.5 x 3.5 μm ellipsoid

Stecoreus

Rare Ascholaria, no ✓ apical pedicels

∴ f. Sticherius ✓ Spores 30-31.5 $\mu\text{m} \times 16.5$

slightly smaller than deglipus type?

Asc albidus ✓ also present.
