

Cow Kraensay 28/9/94 H/255055 (9)

Tring apo - greenish capitate paraphyses  
ca 1-2000 um dia → 250 um

Asci 6 or 65 x 11-12 um, tapering below

spores 8 x 3.5 bisseriate.

"Ascopoma microspora" (check name) Plethosus?

Cheromyces capitate? magenta, sparsely hairy  
apothecia ✓ Spores 26-27 x 13-13.5

Coprinia ✓ 16.5-17 x ? um  
granulate

Pileobas Spores greenish-yellow 10 x 6-7  
crystalline ✓

Coprinus Schlosseri cap 2 mm white  
4 spored Carboeystida < 45 um

no ~~all~~ all cystidia? spores immature. plenty  
rare to cone.

4 spored, but none ripe, even on fully expanded & fading caps  
ellipsoid functionally sterile form of Pellverina?

Ascobas fulvaceus ✓

Schroeteria concolor ✓

Cow Graesley

28/9

Ascaris

Stictosera / deglupta

Spec nearly blue in LC. gel shell of

Spores distinctly asymmetrical spores with

no obvious "peeling", uniformly walled

30µ x 16µ

much var like Stictosera

Saccobolus

white

47 x 16-17

Saccobolus

Purple grey  
Spore ball

Podophorus

canus

Cephus stercorarius

Podospira decipiens
