

Sheep Egilsøy 29.9.94 14/475 305

(11)

Podospira 8 celled 23-24 x 15 Simply ly appage
 hirsute Scales only @ neck
Conium seems intermediate between Conium & hirsutulum?

Also much more robust alates type Same spore size
 Should have larger spores
 ... not

Ascoplasma correct 20 cell minutely verrucose
 no hairs etc
 pale pink 1-2 mm diam.

Sporiumella ~~26~~ 26²⁸⁻⁵ x 5 4 celled, but disarticulating
 in part into 2 celled parts pseudohyphae 85-140²⁰⁰ μm diam
 Michella? probably mimna expanded ascus 175 x 13-15 μm 90x
 unexpanded
 germ slts slightly aged from long
 exis. All 4 cells ± =

also intermedia

Primeris ✓ sterc mixed scales, cellular/bottle
 + Sphaerocysts

4-spored

Spores

ellipsoid

with flattened

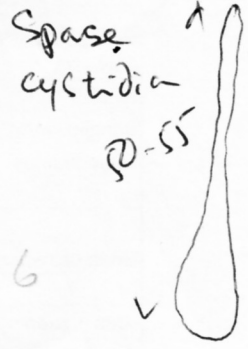

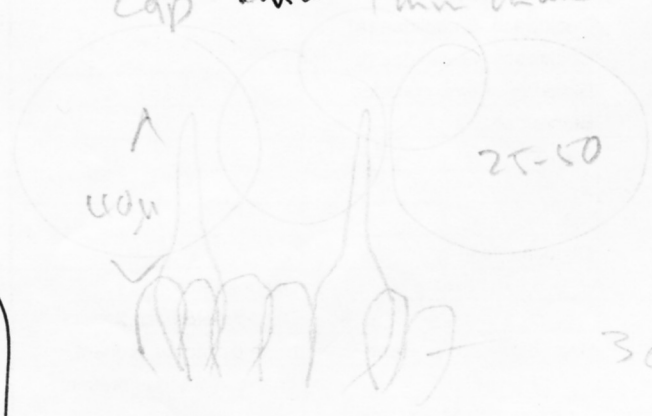

d.s. - 90% ✓ 4 μm

cap white 1 mm diam

Shape 1.8 mm

velor - ?
 Leptomena - sp. too small?
~~Peltocarpus?~~
~~stellata?~~
~~heterocystis?~~ sp too narrow
