

14/5 Sporomniella 8-celled sp 5.5 x 5.5
st. deeper crestation between 4 & 5
diagonal g. slits bipartite ✓

Sporomniella 4 ER Asc 160 x 22 unstat
Sp. 5.5 x 9.5-10 intermedia ✓

21.5 Cop. endosporus ~~parade~~ sp 8 x 8 
Sch. vecticola ✓✓ small, poor scales P-sp
uniseriate 18 x 19 x 9

28.5 Cop. stercorarii? ✓ Cop. endosporus ✓

Conotheca small pentagon setae < 30 long
ca 290 diam
asci short 80 x 13 sp ellipsoid - 8-celled
100- 12-13 x 8-9 x 6-7

Spherical immature pattern with Pro apical
type setae?

Pentagon long simple, non-egg setae < 275.
8 sp sp 41-48 x 22. pedicel long + cylindrical
32-35 long
24 apophyses 4 at each end

- Commons group but too late for

Commis - gymne-ranglone / Dactylidris?

Conochata - large discoid spores scutigera ✓

Sporocolla 4T 45-51 x 9-10
grandispora ✓

Podospora decipiens ✓ 8-sp.

2.6 P. appedrolata ✓ Capsinus white stere?

P. decipiens ✓ spores ✓ OK

Cap. capsus Sp. 4T 38-39 x 6.5

Asci 125-130 x legumiformis ✓
20 overlet.

left side away + reexamined on 22.11 to check

23.11 Podospora appedrolata ✓ sp 32 + 13

Podospora, spherical, with abundant setae of
neck - not aggregated. 8-sp. imbricate, clavate

Conochata scutigera ✓ see 28.5? next p

Sp. 4ER 54-57 x 9-10 intermedia ✓

1 mature ascus in another perithecia
 v. date evenly ellipsoid, biseriate
 Asc: clavate 190 x 45
 Sp 44-46 x 19-20

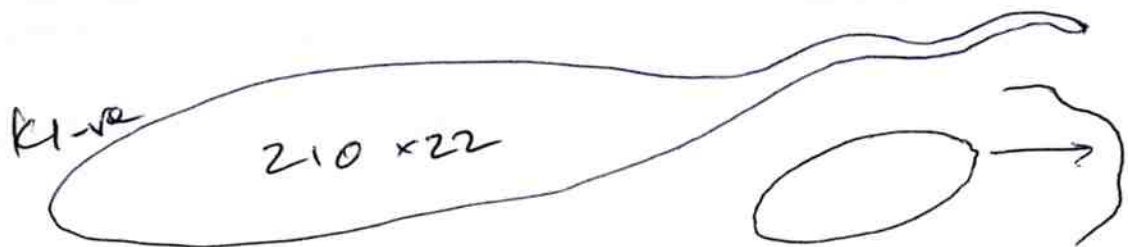

immature spores long clavate 

2y proedgera + pedicel } not discernible
 collapsed

29.11

Perithecia 580 x 410 setae
 <140 at neck
 Spores biseriate, broad ellipsoid
 39-42 x 21-19.5

Asc: clavate - cylindrical

6.12 P. appendiculate ✓ Con Scutigera ✓

odd Ped, as 29.11 etc. few spores mature in
 any ascus 1 in 1, 2 in after.

body long ellipsoid 42-48 x 19.5
 clavate not discernible, pedicel collapsed.
