

25.3  
28.3 Pilaira very pale Ca 11 x 7 ✓

mareaui

31.3

5.4 Pilobolus crystalline 8 x 4 pale ✓

Sordaria not quite ripe.

Spores Ca 25.5 x 14.5-16.

8.4 still not ripe

11.4

Spores broad ellipsoid

25.5-24 x 17.8

papillate, thin sheath ✓

humana

(?)

Brown Sclerotial sponetic Struck

imbricate (?) spores almost spherical 9 x 8 uniseriate

Asci cylindrical 130 x 11-11.5 of which

ca 40 is stalks

No apical structures

Pores straight, hyaline 3.

K1 -

26.7

"Sclerotia" now soft + greenish inside, yellowish

Spores all loose, no sign of asci ca 9-8

± globose with fine rugosity or punctation

Orbicula parvula ✓

(although spores are described as smooth)

dermatocaul wall fragile, a 'jigsaw' of interlocking irregular cells.

15

Cephus stercorarius

Leptothorax curvatus

Orthocentrus parvifrons

Distances

Spines 5-6, smooth and rough.

Symmetry 800 high.

Substrate

terrestrial

E.P.

Cep. stercorarius

P. crystallinus
